**The Russia Trap** George S. Beebe 2019-09-03 "A must read for anyone who cares about our nation's security in these cyber-serious, hair-trigger

times." - Susan Eisenhower Every American president since the end of the Cold War has called for better relations with Russia. But each has seen relations get worse by the time he left office. Now the two countries are facing off in a virtual war being fought without clear goals or boundaries. Why? Many say it is because Washington has been slow to wake up to Russian efforts to destroy democracy in America and the world. But a former head of Russia analysis at the CIA says that this misunderstands the problem. George Beebe argues that new game-changing technologies, disappearing rules of the game, and distorted perceptions on both sides are combining to lock Washington and Moscow into an escalatory spiral that they do not recognize. All the pieces are in place for a World War I-type tragedy that could be triggered by a small, unpredictable event. The Russia Trap shows that anticipating this danger is the most important step in preventing it.

**Collective Memory and European Identity** Willfried Spohn

2016-12-05 Is it possible to create a collective European identity? In this volume, leading scholars assess the link between collective identity construction in Europe and the multiple memory discourses that intervene in this construction process. The authors believe that the exposure of national collective memories to an enlarging communicative space within Europe affects the ways in which national memories are framed. Through this perspective, several case studies of East and West European memory discourses are presented. The first part of the volume elaborates how collective memory can be identified in the new Europe. The second part presents case studies on national memories and related collective identities in respect of European integration and its extension to the East. This timely work is the first to investigate collective identity construction on a pan-European scale and will be of interest to academics and postgraduate students of political sociology and European studies.

To solve this problem, several holistic and integrated alternatives have been developed to reflect a global perspective. This book presents advances in the St. Gallen Global Manufacturing Network Model and its application in numerous industry-, benchmarking- and research projects. The contents combine data-driven solutions with qualitative management frameworks for the strategic optimization of international manufacturing networks. In the first part, the book addresses the foundation of manufacturing network management and further describes the St. Gallen Operational Excellence approaches to manage plant performance. On this basis, the authors show how plant- and network-level performance can be enhanced via key improvement domains (e.g., strategy, configuration, coordination, performance management, digitalization). **Revolutionary Acts** Lynn Mally 2016-11-01 During the Russian Revolution and Civil War, amateur theater groups sprang up in cities across the country. Workers, peasants, students, soldiers, and sailors provided entertainment ranging from improvisations to gymnastics and from propaganda sketches to the plays of Chekhov. In Revolutionary Acts, Lynn Mally reconstructs the history of the amateur stage in Soviet Russia from 1917 to the height of the Stalinist purges. Her book illustrates in fascinating detail how Soviet culture was transformed during the new regime's first two decades in power. Of all the arts, theater had a special appeal for mass audiences in Russia, and with the coming of the revolution it took on an important role in the dissemination of the new socialist culture. Mally's analysis of amateur theater as a space where performers, their audiences, and the political authorities came into contact enables her to explore whether this culture emerged spontaneously "from below" or was imposed by the revolutionary elite. She shows that by the late 1920s, Soviet leaders had come to distrust the initiatives of the lower classes, and the amateur theaters fell increasingly under the guidance of artistic professionals. Within a few years, state

agencies intervened to homogenize repertoire and performance style, and with the institutionalization of Socialist Realist principles, only those works in a unified Soviet canon were presented.

Goddess of the Market Jennifer Burns 2009-10-19 Worshipped by her fans, denounced by her enemies, and forever shadowed by controversy and scandal, the novelist and philosopher Ayn Rand was a powerful thinker whose views on government and markets shaped the conservative movement from its earliest days. Drawing on unprecedented access to Rand's private papers and the original, unedited versions of Rand's journals, Jennifer Burns offers a groundbreaking reassessment of this key cultural figure, examining her life, her ideas, and her impact on conservative political thought. Goddess of the Market follows Rand from her childhood in Russia through her meteoric rise from struggling Hollywood screenwriter to bestselling novelist, including the writing of her wildly successful *The Fountainhead* and *Atlas Shrugged*. Burns highlights the two facets of Rand's work that make her a perennial draw for those on the right: her promotion of capitalism, and her defense of limited government. Both sprang from her early, bitter experience of life under Communism, and became among the most deeply enduring of her messages, attracting a diverse audience of college students and intellectuals, business people and Republican Party activists, libertarians and conservatives. The book also traces the development of Rand's Objectivist philosophy and her relationship with Nathaniel Branden, her closest intellectual partner, with whom she had an explosive falling out in 1968. One of the Denver Post's Great Reads of 2009 One of Bloomberg News's Top Nonfiction Books of 2009 "Excellent." --Time magazine "A terrific book--a serious consideration of Rand's ideas, and her role in the conservative movement of the past three quarters of a century." --The American Thinker "A wonderful book: beautifully written, completely balanced, extensively researched. The

match between author and subject is so perfect that one might believe that the author was chosen by the gods to write this book. She has sympathy and affection for her subject but treats her as a human being, with no attempt to cover up the foibles." --Mises Economics Blog *Russian Second-language Textbooks and Identity in the Universe of Discourse* Olga Mladenova 2004 This book provides an overview of the changes of the Second-Language Learning discursive formation and the Identity discursive formation in Russian history. It proposes an explanatory model in which small-scale linguistic detail is joined with larger-scale language units in order to illuminate matters of cultural importance in their linguistic guise.

Geospatial Thinking Marco Painho 2010-07-20 For the fourth consecutive year, the Association of Geographic Information Laboratories for Europe (AGILE) promoted the edition of a book with the collection of the scientific papers that were submitted as full-papers to the AGILE annual international conference. Those papers went through a three competitive review process. The 13 AGILE conference call for full-papers of original and unpublished fundamental scientific research resulted in 54 submissions, of which 21 were accepted for publication in this volume (acceptance rate of 39%). Published in the Springer Lecture Notes in Geoinformation and Cartography, this book is associated to the 13 AGILE Conference on Geographic Information Science, held in 2010 in Guimarães, Portugal, under the title "Geospatial Thinking". The efficient

use of geospatial information and related technologies assumes the knowledge of concepts that are fundamental components of Geospatial Thinking, which is built on reasoning processes, spatial conceptualizations, and representation methods. Geospatial Thinking is associated with a set of cognitive skills consisting of several forms of knowledge and cognitive operators used to transform, combine or, in any other way, act on that same knowledge. The scientific papers published

in this volume cover an important set of topics within Geoinformation Science, including: Representation and Visualisation of Geographic Phenomena; Spatiotemporal Data Analysis; Geo-Collaboration, Participation, and Decision Support; Semantics of Geoinformation and Knowledge Discovery; Spatiotemporal Modelling and Reasoning; and Web Services, Geospatial Systems and Real-time Applications.
